

Managing Your Watchlist

This page describes how to manage locations and notifications on your Watchlist.

You will be notified when we publish new imagery that contains a location on your Watchlist.

In addition to this guide, you can view our [Service Portal tutorial video on the Location Watchlist](#).

You can add items to your Watchlist from within the location panel in the [Location Tool](#):

- In the [New MapBrowser](#) click the "Watch" button within the location panel.
- In [MapBrowser Classic](#) select the "Add to Watchlist" option within the location panel.

You will start receiving emails to the address we have on file when updated imagery becomes available for the location that you have selected.

Once a location has been added to your Watchlist, you can manage it from your [Watchlist page](#). A link to your Watchlist will also be provided in the notifications that we send you.

From your Watchlist, you can:

1. Stop watching a location
2. Link to the most recent imagery for the location
3. Elect to stop receiving notifications via email, but continue to watch the location.

If you have trouble directly accessing imagery from the email, try logging in first, then accessing the link.
