

How can I view historical Nearmap imagery in Nearmap on OpenSolar?

Yes. If you are using Nearmap on OpenSolar then you have access to our catalog of historical Vertical imagery. Here's how to access older imagery:

1. In OpenSolar, with your project in view in Studio, click on one of the image thumbnails that are across the bottom left of the map.
2. In the left-hand panel, click the date beneath Historical Vertical Imagery.
3. Scroll down and click on the historical capture you want.
