

How can I indicate the inverter location?

The CEC permits the inverter location to be displayed in written format on the quote/contract. So the best way to do this right now would be to use the [project-specific proposal content](#) or [project-specific contract terms](#) within the Project zone. Our dev team has taken note of the importance of this and we will hopefully be able to develop an "inverter location" field within the site details in the future.
