

# Is it possible to filter post-catastrophe surveys using Nearmap APIs?

Currently, post-catastrophe surveys are not uniquely tagged, so there is no way to identify or filter on these surveys using Nearmap APIs.

If you have purchased the Nearmap ImpactResponse product as part of your subscription, you'll receive an email to let you know when a new event has been captured, and another email to let you know when the imagery has been published including a link to the relevant survey locations and dates.

If you want to compare pre- and post-catastrophe imagery using the Tile API, we've created a [tutorial](#) on using the Tile API & QGIS to view and compare imagery.
